SUMMARY

Full Stack Software Engineer with 4+ years of experience building and shipping production grade web applications using React, TypeScript, Node.js, and PostgreSQL. Delivered measurable performance improvements across frontend, backend, and database layers in both startup and enterprise environments. Experienced in designing REST and GraphQL APIs, integrating AI driven features, implementing secure authentication systems, and optimizing database performance. Focused on delivering reliable software and taking full ownership of features from design to production in Agile environments.

EXPERIENCE

Community Dreams Foundation

Full Stack Developer

Remote

Nov 2025 – Present

- Built end-to-end onboarding and session management workflows using React and Node.js, reducing new user setup time by 30% through a streamlined multi-step registration flow.
- Established JWT-based role-based access control (RBAC) supporting 5+ user roles, strengthening platform security and improving audit traceability across internal and external access points.
- Refactored React component architecture and enhanced Redux state management, improving navigation responsiveness by 20% for high-traffic dashboard workflows.
- Restructured PostgreSQL queries and introduced composite indexes on frequently accessed tables, cutting average query latency by 35% and minimizing recurring production incidents.

Asics Technologies

Software Developer

Hyderabad, India

Jan 2021 – Jul 2024

- Engineered RESTful backend services using Node.js and Express supporting user transactions and core business workflows for three production applications serving thousands of daily users.
- Modeled normalized PostgreSQL schemas and wrote complex analytical queries using CTEs and window functions, reducing report generation time by 40%.
- Constructed responsive React dashboards with dynamic data visualizations connected to REST APIs, replacing manual reporting workflows for two enterprise clients.
- Boosted API performance by resolving N+1 query patterns, adding database indexes, and caching frequently accessed endpoints, while expanding automated test coverage from 40% to 80% using Jest and Cypress.
- Maintained CI/CD pipelines with GitHub Actions to streamline testing, linting, and zero-downtime deployments to AWS EC2.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java, C#, HTML5, CSS3

Frontend: React.js, Next.js, Angular, React Native, Redux Toolkit, Tailwind CSS, Vite, Component Design, State Management, Responsive Design

Backend: Node.js, Express.js, ASP.NET Core (basic), REST API Design, GraphQL, WebSockets, JWT, RBAC, OAuth 2.0

Databases: PostgreSQL, MongoDB, MySQL, Redis, query optimization, indexing, Prisma, Sequelize, SQLAlchemy

Testing: Jest, Cypress, unit/integration testing

Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, docker-compose, CI/CD pipelines, GitHub Actions, PM2, Sentry

Concepts: Full Stack Development, System Design, Microservices Architecture, Event-driven Systems, Performance Optimization, Secure Coding, Agile/Scrum

AI & Tools: OpenAI API, LLM Integration, Prompt Engineering

PROJECTS

Job Portal Application — React, TypeScript, Node.js, Express, PostgreSQL — GitHub Nov 2023 – Apr 2024

- Architected a production-grade full-stack recruitment platform with a decoupled client/server structure, Sequelize-managed migrations, and a dedicated middleware layer handling authentication, validation, and error boundaries across all API routes.
- Incorporated OpenAI ChatGPT API to automate candidate-job matching and resume analysis, cutting manual recruiter screening effort by an estimated 60% for shortlisting workflows.
- Deployed with Docker and docker-compose using PM2 cluster mode across multiple worker processes, maximizing CPU utilization and enabling zero-downtime restarts under load.
- Enforced JWT-based authentication with role-based route protection for recruiter, candidate, and admin personas, with middleware-level authorization checks across all sensitive endpoints.
- Achieved end-to-end test coverage using Cypress across critical hiring flows alongside unit tests, and set up Sentry with source maps for real-time production error tracking.
- Added i18n multi-language support and fine tuned PostgreSQL job search with targeted indexing, improving search response time by 25% and keeping API responses under 200ms for 95% of requests.

Appointment Scheduling System — Node.js, Express, EJS, PostgreSQL — GitHub Jun 2023 – Oct 2023

- Built a multi user scheduling platform with live availability matching, calendar based slot management, and role separated workflows for administrators, providers, and clients.
- Engineered conflict detection using PostgreSQL advisory locks and UNIQUE constraints to enforce transactional integrity on overlapping time slots, reducing scheduling conflicts by 20%.
- Constructed a server side rendered UI with EJS templating, featuring dynamic form validation, session based authentication, and role based route protection across all user facing pages.
- Triggered automated booking confirmations and reminder notifications via email pipelines, cutting no show rates and eliminating manual follow up effort for appointment management.
- Accelerated database query performance through targeted indexing on appointment timestamps and user foreign keys, improving availability lookup response time for concurrent booking requests.

EDUCATION

University of Cincinnati

Master of Engineering in Computer Science

Cincinnati, OH

Aug 2024 – Apr 2026

Malla Reddy College of Engineering and Technology

Bachelor of Technology in Computer Science (Data Science)

Hyderabad, India

Sept 2020 – May 2024
